DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 74-76, 78, 84 are rejected under 35 U.S.C. 102(b) as being anticipated by Hall et al (US 4,802,539).

The bit body and the plurality of roller cone cutters is clearly shown in Figs 2, 3, 14, and 15, where each of the roller cones 136 is rotatably mounted on the bit body about a respective cone axis and having plurality of rows of cutting inserts thereon. The gage row and the gage insert is anticipated by gage inserts 138 shown in fig. 3 and col. 5, lines 67+. The acute angle between the insert axis and the cone axis is anticipated by Fig. 3, where the gage insert is disposed at a selected distance from the shoulder near numeral 169 or 168 (See Fig. 3). The acute angle shown in Fig. 3, is also anticipated to be between 0-50 degrees. The off gage row is anticipated by row where inserts 137 are disposed.

Allowable Subject Matter

Claims 64-73, and 85-96 are allowed.

Claims 77, 79-83 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Scott et al, Minikus et al, Hooper et al, and Portwood et al all show rolling cones bits having special gage row arrangements.
